BLACK PANTHER NEKO

($BLP) WHITE PAPER

> "
We serve Wakanda and let us not forget, we also serve each other. Together we will always rise.
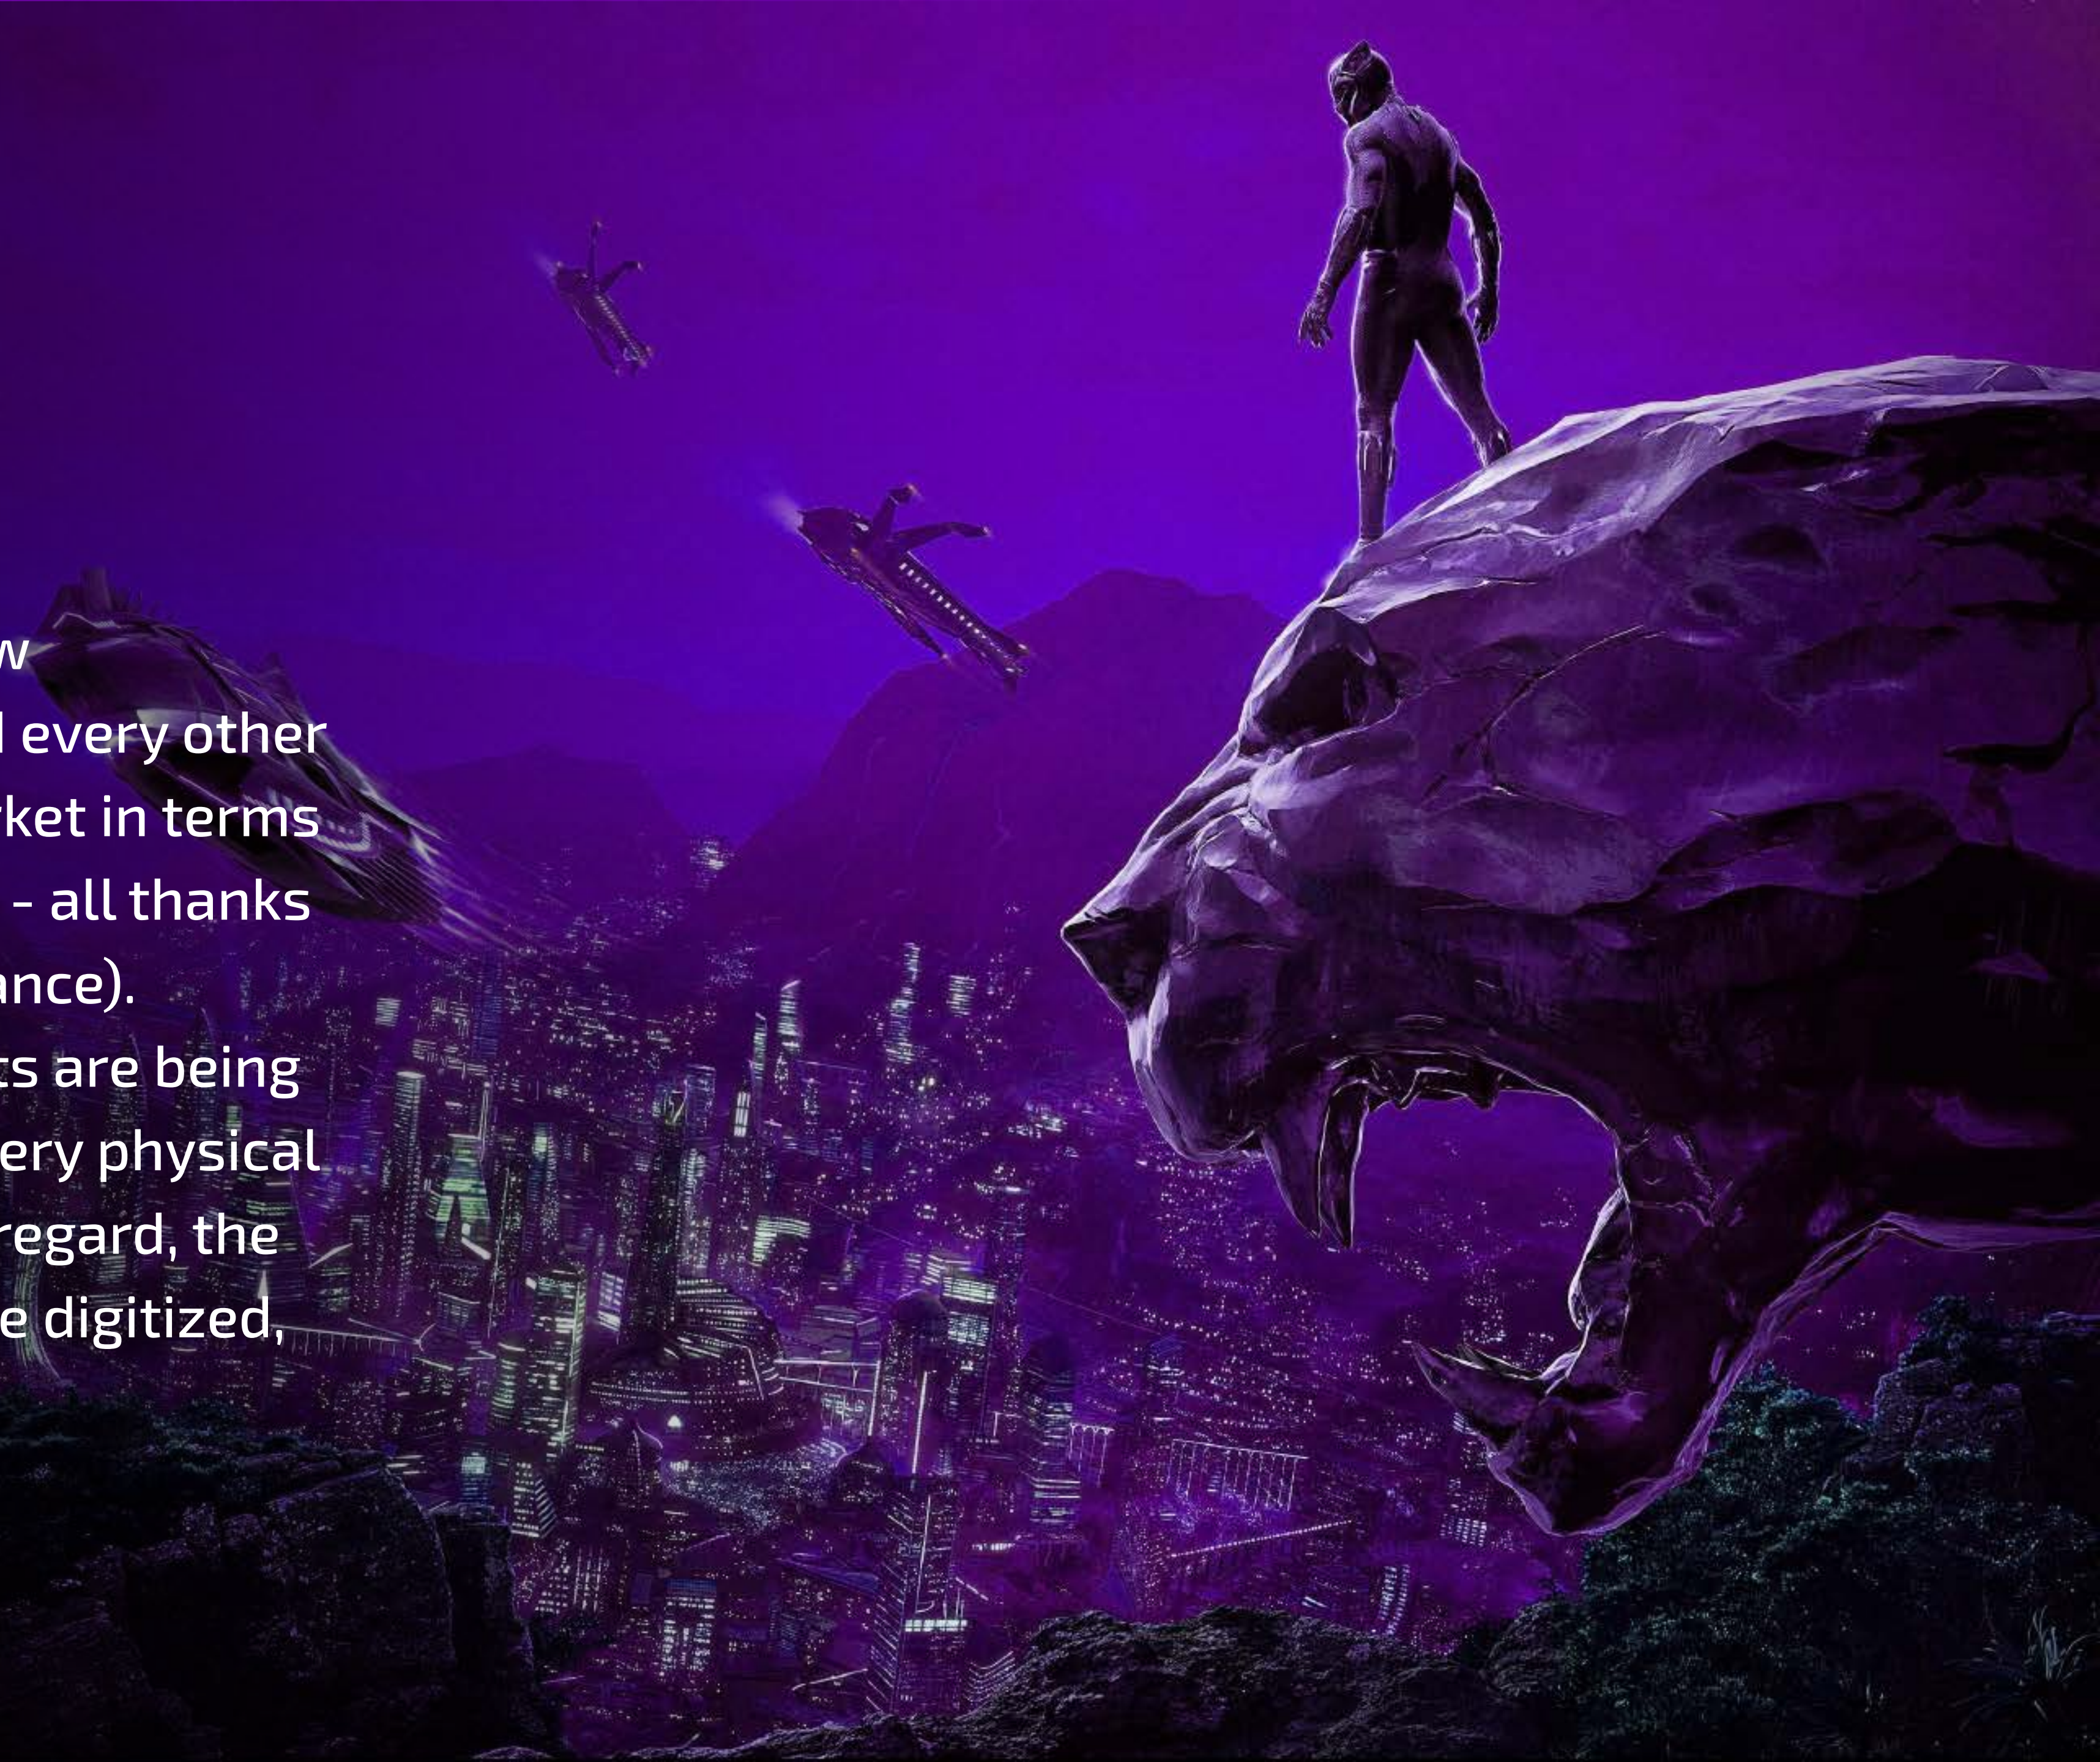

- T' Challa, 'Black Panther'

INTRODUCTION

Digital currencies have now successfully overwhelmed every other aspect of the financial market in terms of adoption and utilization – all thanks to DeFi (Decentralized Finance). Nowadays, Smart Contracts are being developed to suffice for every physical finance expedition. In this regard, the financial world is now more digitized, safe, and profitable.

As profitable as investing in digital assets may be, impermanent losses still stand as a major challenge to every digital trader. In light of this, we present the Black Panther Neko Token [$BLP] - systematically designed to strive in any market condition and ensure minimized negative price movement.

In addition to serving as a store of value, the Black Panther Neko Token is inspired by the T'challa the Black Panther and aimed at protecting and providing financial security for our Wakanda community. Hence Black Panther Neko is 100% community-oriented in all ramifications.

WAKANDA FOREVER

OVERVIEW

Black panther Neko ($BLP) is a fun, community-oriented token built on the BEP20 (BSC) ecosystem to tokenize a gaming software currently in development. We bank on our special Gaming NFT collections and a unique Tokenomics to engineer the development and growth of the token.

Regarding our plans of financially supporting the Wakanda community and Africa at large, the Black Panther Neko team have plans in place for occasional events where charitable activities will be carried out in some under-privileged areas of Africa. We will keep striking deals and making sacrificial max efforts towards the development and growth of our supporters.

Subsequent events such as competitions, campaigns, and voting sessions will be introduced occasionally to create awareness and generate more funds for our marketing and software development. We are devoted to making deals that will profit the Wakanda Community while developing more impactful software for advanced utilization of the $BLP. We will conduct a presale before launch, more details on this will be communicated via our social media channels.

THE $BLP SMART CONTRACT

TOKENOMICS

The highlight of the Black Panther Neko is that our tokenomics is designed in such manner that transactions process without charges. Our smart Contract is built with No Tax whatsoever thereby all occasional burns will be carried out manually.

This tokenomics setup is embedded in the development of our Smart contract from the time of launch. Every strategy aims to decrease unhealthy volatility and excessive dumping by whales who want to take advantage of our community.

Total supply: 1,000,000,000,000,000
Presale: 300,000,000,000,000
Liquidity: 200,000,000,000,000
Marketing/Promotions: 100,000,000,000,000
Charity: 200,000,000,000,000
Burns: 200,000,000,000,000

Token Burning

Immediately after Pancake swap listing, 5% of the total supply of $BLP will be sent to the black hole address, thereby permanently reducing the supply to profit the initial adopters.
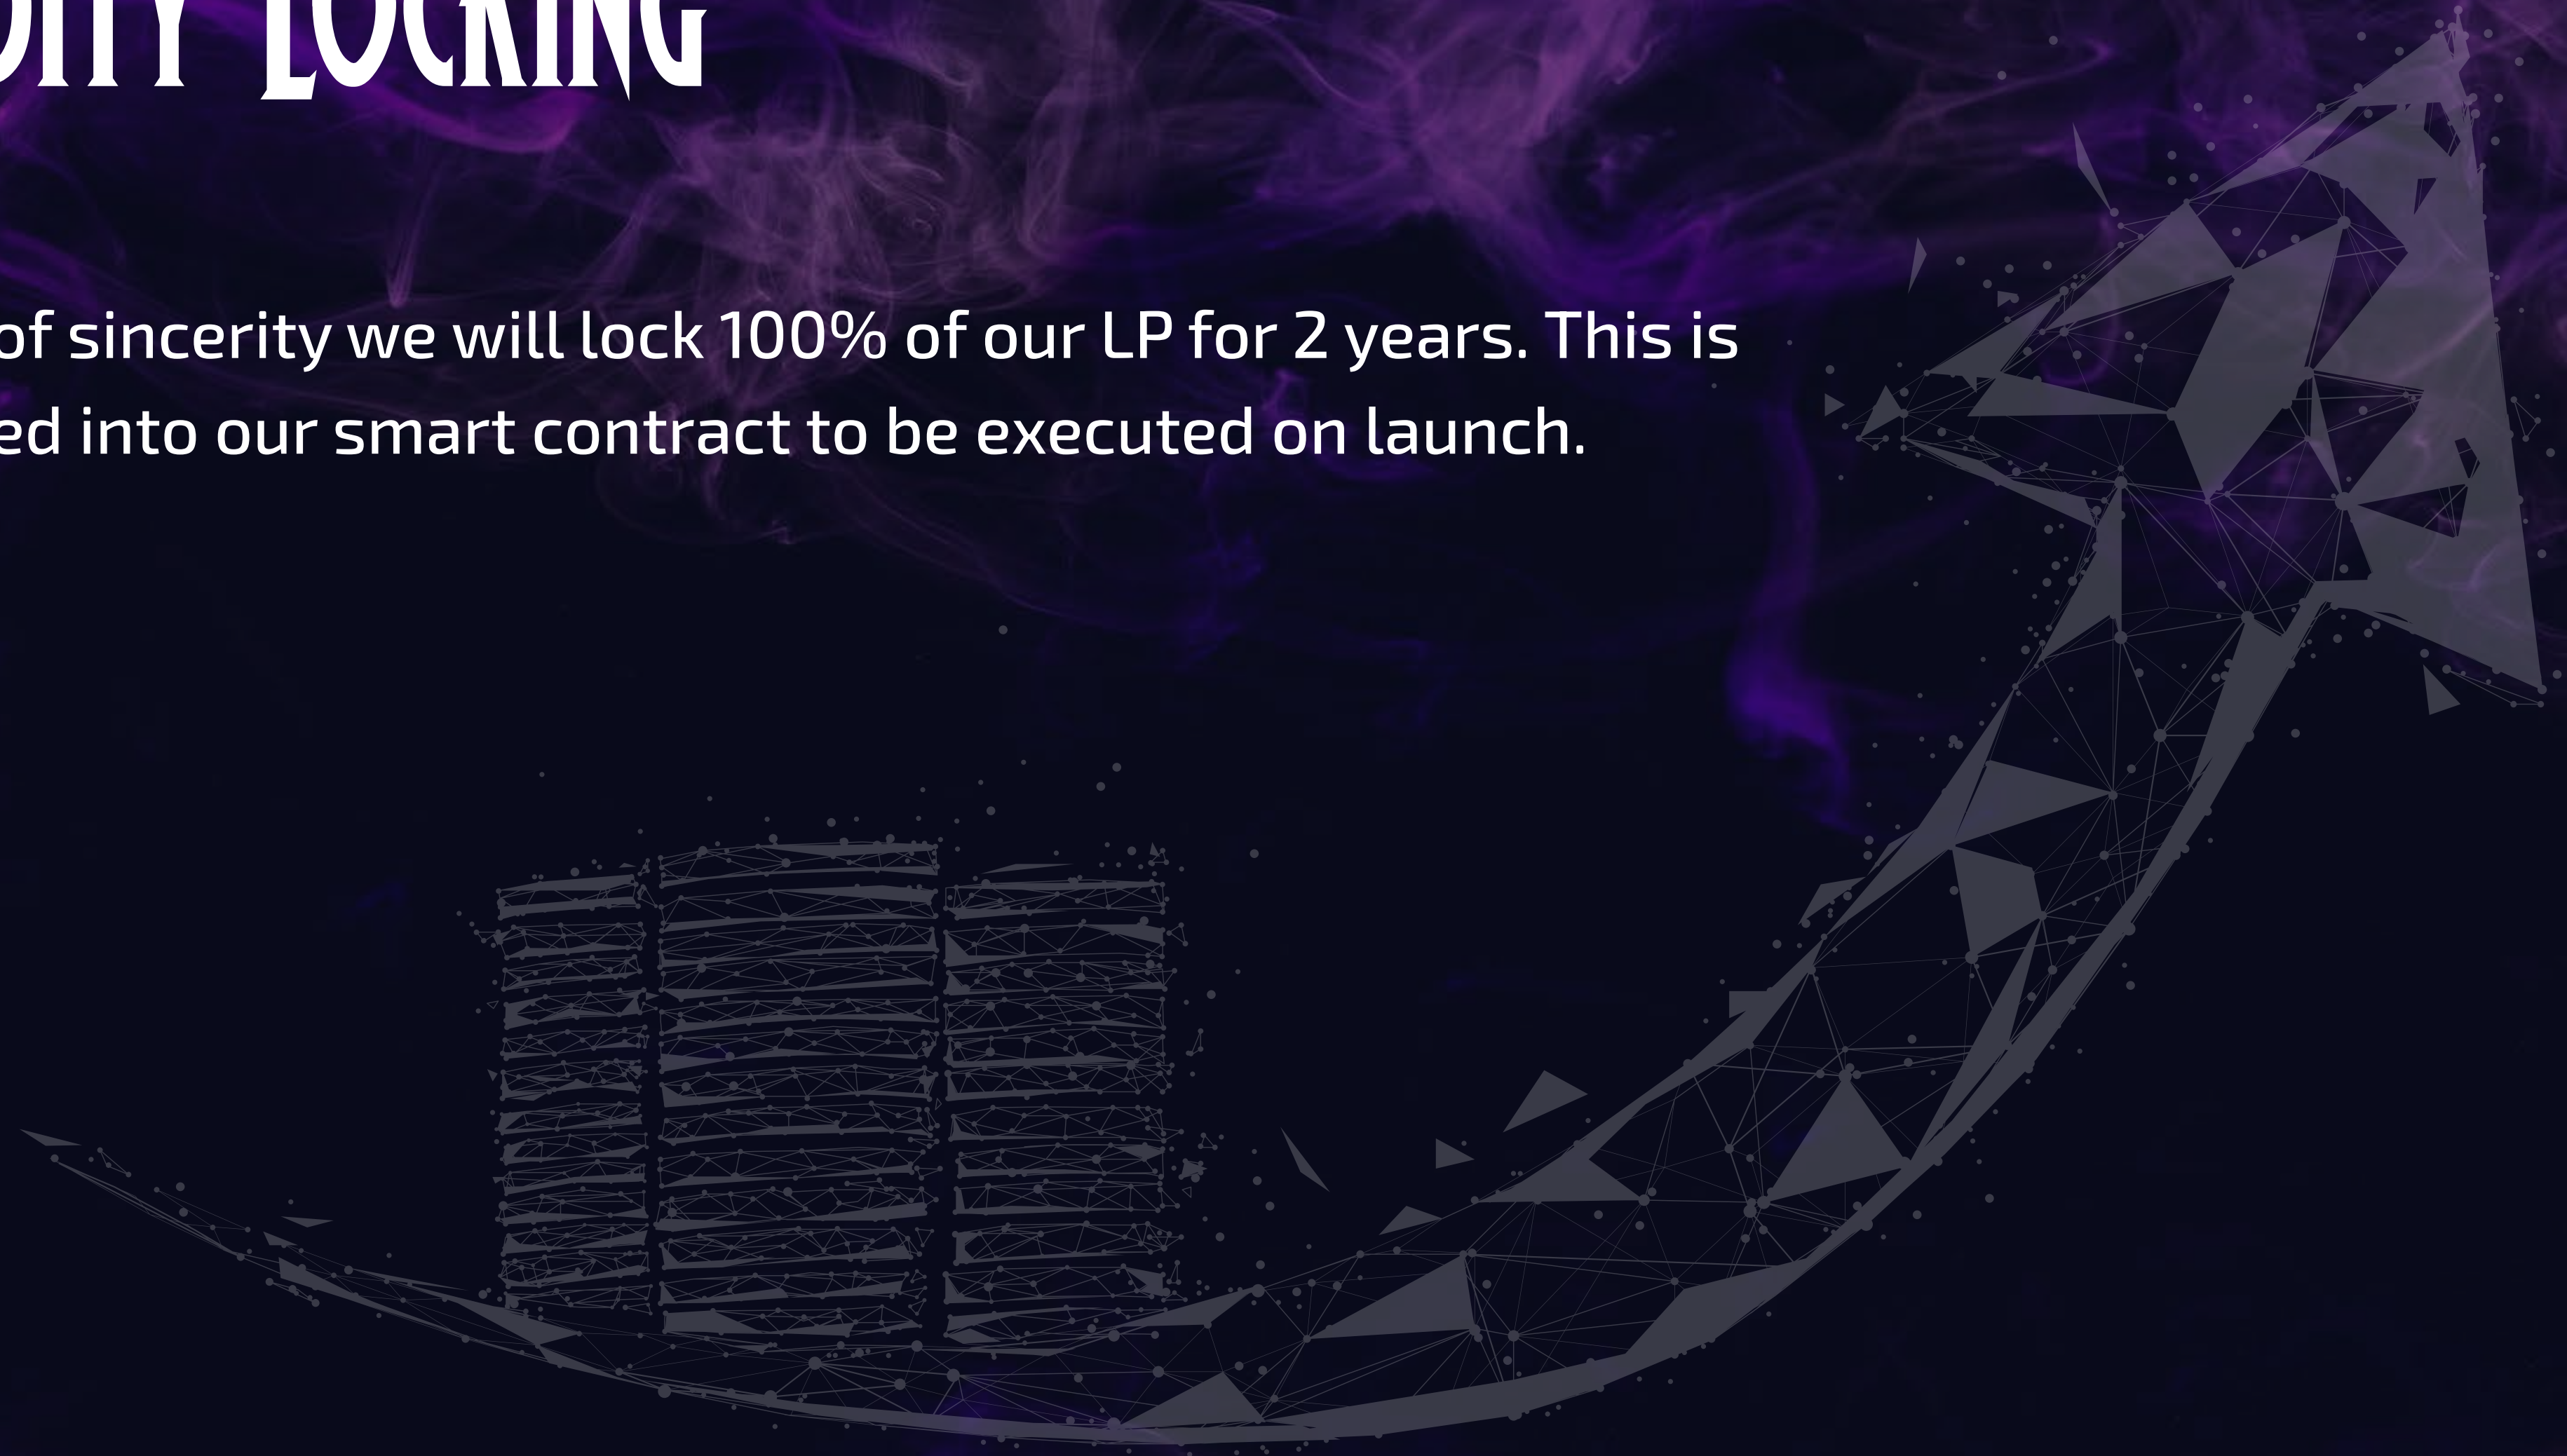

Black Hole Address: 0x0000000000000000000000000000000000000001

Since the black hole (burn) address will be regarded as a holder it will continue to receive a portion of burnt tokens resulting in a persistent decrease in the circulating supply of $BLP.

Liquidity Locking

As a show of sincerity we will lock 100% of our LP for 2 years. This is programmed into our smart contract to be executed on launch.

Organic Growth

Whales are notorious for taking advantage of strong communities for personal profit.
The Black Panther Neko smart contract has been developed to eradicate whale impact.
Black Panther Neko ($BLP) is designed with;

- A maximum circulating supply of 1,000,000,000,000,000 tokens;
- The maximum tokens per transaction in (%) = 1%
- The maximum tokens per wallet in (%) = 10%

LIQUIDITY DETAILS

100 % LP locked for 2 years on launch.

SAFETY

In all activities we emphasize the safety of our community and your funds as protectors of the Black Panther Community. All contracts will be transparent and accessible on the Binance Smart Contract on launch, Hashes of every transaction will be delivered on our Official Telegram Channel.

Furthermore, 100% of the total supply will be locked for 2 years automatically on launch to integrate longevity into the project. Black Panther Neko is not just a token, it is a crypto and tech project.
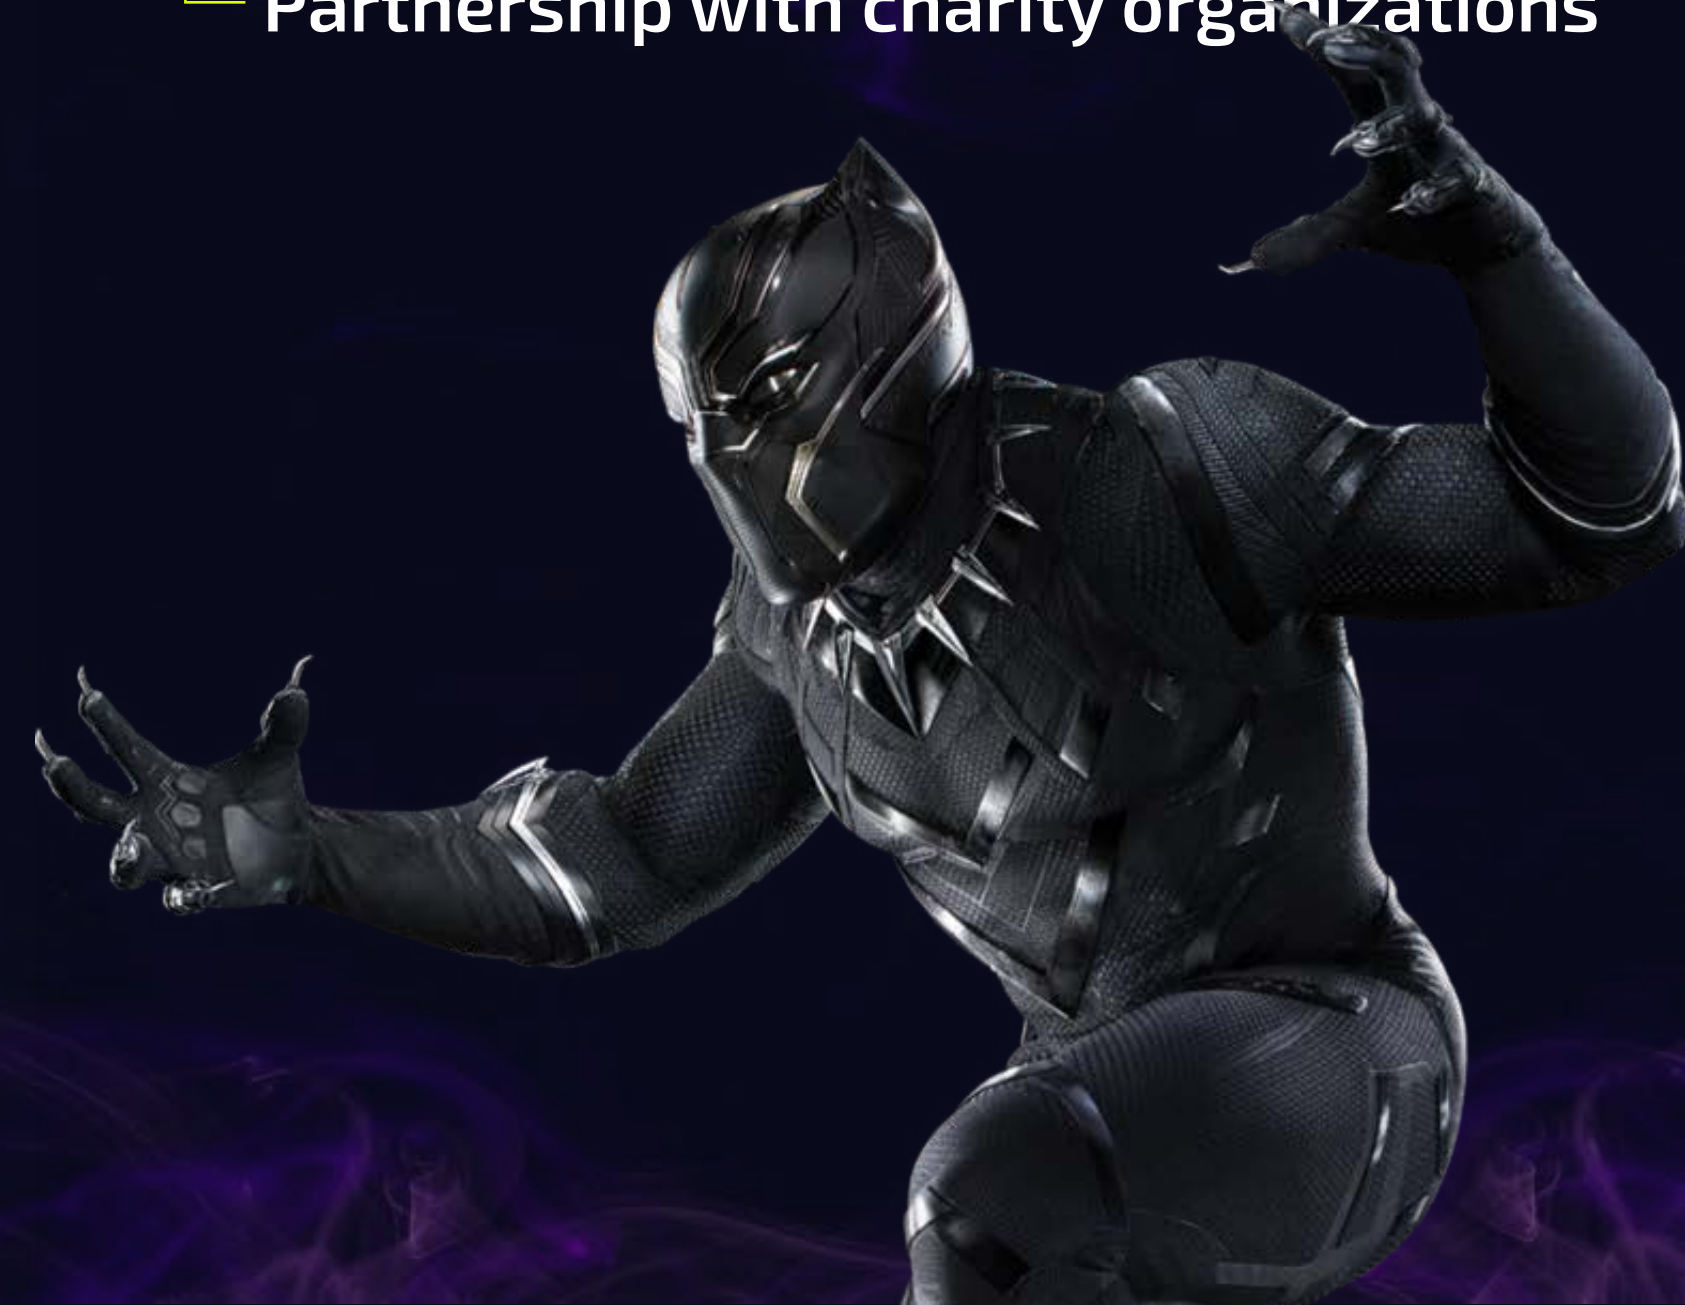

ROAD MAP

Q1
- Community development
- Website release
- WhitePaper release
- Presale
- Initial marketing effort

Q3
- NFT and Game development
- Adoption of Use Cases
- More marketing

- Ecosystem diversification
- Partnership with charity organizations

Q2
- CoinGecko, CoinMarketCap and Trust Wallet enlistment.
- Smart contract verification
- Community events and competitions
- More marketing from generated funds
- Certik Audit

The Black Panther Token Team

Black Panther Neko is a community-based project inspired by fun and financial security. Out of the community, we have forged a strong workforce of highly curated skilled crypto enthusiasts who will devote time and effort into developing and promoting this project to the moon.

All trades are subjected to NO tax. This is aimed at supporting members of our Wakanda community by allowing them conveniently buy and sell within the anti-whale protection trades and wallet margins encoded in our smart contract.
